COMMERCIAL SECTION

AMENDMENT

Gentlemen:

Please amend the above-identified application by
adding the following claims.

55
257. A device for detecting a specific material of
interest in a package or suitcase comprising:

means to acquire x-ray transmission data through many
spatially adjacent points of a package or suitcase at least at
two substantially different energies,

and means to computer process the x-ray data which
include:

treating the data spatially as numerous "object"
regions and neighboring background regions, where each "object"
region is taken as having substantially the same x-ray
attenuating properties as a neighboring background region except
for the addition of a thickness of unknown material,

06-1050 010 203 60.00CH

Date of Deposit May 7, 1991
I hereby certify under 37 CFR 1.8(a) that this
correspondence is being deposited with the United States
Postal Service as first class mail with sufficient
postage on the date indicated above and is addressed to
the Commissioner of Patents and Trademarks, Washington,
D.C. 20231.

Suzanne C. Kelly

122

P₁ processing the data in numerous "object" regions and respective neighboring background regions to characterize the x-ray properties of the assumed thickness of unknown material of the "object" regions with the contribution of background removed,

P₁ and comparing the determined x-ray properties of the thickness of unknown material in the "object" regions to the properties of the specific material of interest to determine if the "object" regions are likely to contain the specific material of interest. (S)

W 56
55
(S) 58. The device of claim 57 in which the characterization of the x-ray properties of the thickness of unknown material for an "object" region includes a parameter substantially equivalent to the effective atomic number, Z, of the unknown material. (S)

57
(S) 59. The device of claim 56 in which the effective atomic number Z is calculated with an accuracy enabling distinction between plastic substances having small differences in effective atomic numbers. (S)

58
(S) 60. The device of claim 55 wherein the means to computer process the x-ray data is constructed to treat a given region of the data as a background region during one comparison and as an "object" region during another comparison. (S)

⁵⁹
~~61~~ The device of claim ⁵⁵~~57~~ wherein the means to computer process enables the background region to include the same material as the unknown material but of a lesser thickness. ~~62~~

⁶⁰
~~62~~ The device of claim ⁵⁵~~57~~ wherein each object region is a pixel, i.e. the smallest size resolution element of the device. ~~63~~

Please make any credits or charge any deficiencies to
Deposit Account No. 06-1050.

Respectfully submitted,
